Introduction

Company Information: **Ardent Industries**, an organization with strong desire of attaining achievements and success through loyalty and hard work. **Ardent Industries** was established in 2011 with strong Desire. We are providing a web services, developing Enterprise Resource Planning Modules and software Solution to our customer. We are also doing a web Development and web designing and various application that are useful in different domain. Like Banking, Health Care, business, Education   etc.

With our experience in various projects, we are confident that we have been able to face the challenges of the global market place and deliver quality products in adherence with market standards and parameters. **Ardent Industries** is a customer oriented company and work with the objective of achieving maximum customer satisfaction. The company has adopted innovative procedures and practices to meet customer expectations. We always welcome any feedback or suggestions from clients in order to serve them better. The company has emerged with its dedication & commitment to provide quality products & services to its client and become one of the significant players in its area of operation.

We are doing the following things.

Application Development

Our goal is to deliver premium quality software development services while giving unmatched value to enterprises worldwide at an affordable cost. Our software development services include business consultation, project planning, system analysis, business analysis, custom software solutions, database design, programming, user interface implementation.

Product Development

Our product development services target specific enterprise demands in application development and integration. We are providing product development services for windows desktop, client server or multi tier application, internet/intranet/extranet applications and server platforms. Our services are useful for new product development, OS porting, reengineering, upgrading for newer windows / Linux platforms, ongoing development, support and sustenance of existing software product.

Online Application

Our web technology experts can develop customized online platform that achieve client's goal and saves their time and cost. Major advantage of web platform is ease of use, sharing and distributing information across the organization and stakeholders. We can deliver wide span of web systems like Content management System, Document Organization and Management, CRM Applications, SCM and Inventory, Scheduling and Calendaring Applications, Social Networking and Collaboration applications. We make custom web site design that can assemble individual business needs and resources. Our approach is to work as a partner & seek growth in our client's growth.

API Integration

An **application programmer interface** (API) is a document, supplied by 3rd party software vendors, that contains all of the technical details required for programmers to integrate software to a custom application. If your software vendor is able to supply the API documentation for the software system, then you have an opportunity to integrate to a custom software application that is specialized for your needs. Many companies already use a 3rd party software application to run their business operations, but find that the software is lacking features or customization that is needed to fit perfectly. While they are unable to abandon the current software systems due to financial reasons or logistics, they still have the option of writing a custom application that integrates with the 3rd party software. Our programmers excel at writing applications that integrate with other systems.
For ex: 3CX API integration, FB API integration, Connect Wise API integration

Android/Iphone Application Development

We provide professional android/iphone application development services to develop Multimedia Applications, Communication Applications, Business Applications, Finance Applications and Web Service Based Applications. Our company is equipped with team of android/iphone application developer who are expert with Android/Iphone application development

Business Concept

Products
